## DIFFERENTIATORS

- SDVOSB, SDVBE, and VOSB certified—100% owned by service-disabled veteran.
- 13 years experience as a government contractor.
- Synergistic relationship with EcoWater Systems CHC.
- Offering Controlled Hydrodynamic Cavitation (CHC) - over 6,000 installations. CHC is a proven chemical-free environmentally safe water treatment used in HVAC, process cooling, and refrigeration systems to control scale, biological growth including Legionella, and corrosion, without the use of chemicals.
- Adding a CHC System to a cooling tower saves energy, reduces water consumption up to 30%, and reduces tower sewer discharge up to 50%.
- Offering Safe Fountain System (SFS). SFS reduces most common contaminants found in water distribution systems including lead, VOCs, bacteria, virus, and cysts—ensuring the water you drink is safe, even in the event of a local boil alert.
